

Starphire ultra-clear jumbo size low-iron tempered laminated Low E insulating glass curtain wall facade

Glass [curtain walls](#) always use insulating glass to ensure high quality common laminated insulating glass because of its safety glass. Low-iron tempered laminated low-emissivity insulating glass is the best combination of glass curtain wall, which combines the advantages of all glass.

[Low-iron glass](#) has the lowest self-explosion, high light transmittance, good transparency, and is very safe and durable. The broken tempered glass particles are small and harmless. PVB and SGP films laminate small particles together. Low-emissivity glass can not only be insulated, but also has the effect of environmental protection and energy saving. As a result, designers and owners are becoming more and more popular.

Insulating glass specifications

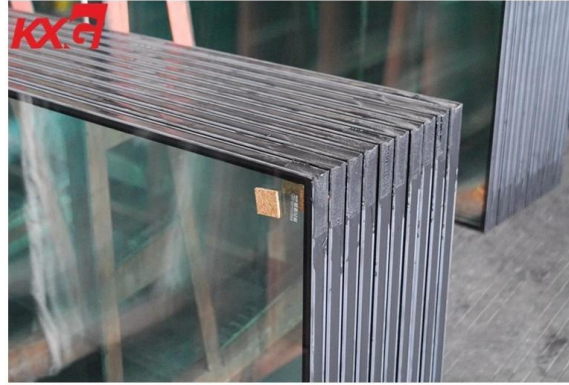

Insulating glass thickness: 4 + 5A + 4, 5 + 9A + 5, 6 + 12A + 6, 8 + 12A + 8, 10 + 12A + 10, 12 + 12A + 12

Glass color: transparent super clear, gray, bronze, gray, blue

Glass shape: flat or curved

Glass size: 3000x13000mm

Original glass: low-emissivity glass, tempered glass, laminated glass, transparent float glass, tinted glass, [reflective glass](#)

You can choose the relevant glass from KXG

Flat insulating glass, curved insulating glass, transparent insulating glass, colored insulating glass, painted insulating glass, screen printing insulated glass, ceramic welded insulating glass, reflective insulating glass, low temperature insulating glass, tempered insulating glass, laminated [insulating glass](#), Double-layer insulating glass, three-layer insulating glass, multi-layer insulating glass, insulating glass shutters, insulating glass shutters

Low iron toughened laminated low e energy saving insulated glass package in KXG
