

**12.76 mm toughened**

**12.76 mm toughened**

12.76 mm toughened glass is a type of safety glass. It is made by heating a single layer of glass to a high temperature and then rapidly cooling it. This process makes the glass stronger and more resistant to impact. It is commonly used in applications where safety is a concern, such as in automotive windows, aircraft windows, and in buildings. The glass is typically 6 mm thick and is held together by a 0.76 mm PVB interlayer. This interlayer is a plastic film that bonds the two glass layers together, preventing them from shattering and falling apart in the event of an impact. The resulting Laminated glass is a strong, clear material that is used in a wide range of applications.

**12.76 mm Laminated**

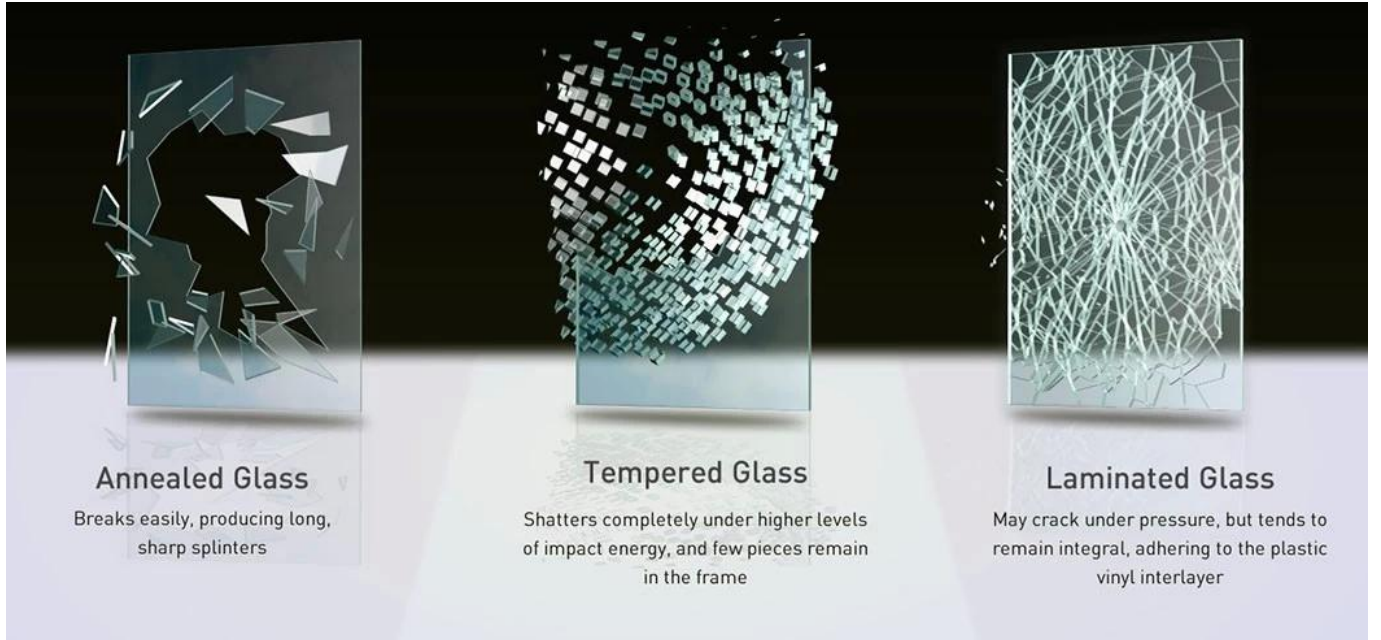

**1. 12.76 mm Laminated**

12.76 mm Laminated glass is a type of safety glass. It is made by bonding two or more layers of glass together with a plastic interlayer. The interlayer is a plastic film that bonds the two glass layers together, preventing them from shattering and falling apart in the event of an impact. The resulting Laminated glass is a strong, clear material that is used in a wide range of applications. It is commonly used in applications where safety is a concern, such as in automotive windows, aircraft windows, and in buildings. The glass is typically 6 mm thick and is held together by a 0.76 mm PVB interlayer. This interlayer is a plastic film that bonds the two glass layers together, preventing them from shattering and falling apart in the event of an impact. The resulting Laminated glass is a strong, clear material that is used in a wide range of applications.
