Laminated glass is a type of safety glass that consists of two or more layers of glass held together by a plastic interlayer. This interlayer is made of a special plastic that is designed to be flexible and strong. When the glass is broken, the interlayer holds the pieces together, preventing them from falling and causing injury. Laminated glass is used in a variety of applications, including windows, doors, and skylights. It is also used in automotive applications, such as windshields and side windows. Laminated glass is a safe and secure option for any application where safety is a concern. UltraClear is a type of laminated glass that is made from a special plastic interlayer that is designed to be clear and strong. It is used in a variety of applications, including windows, doors, and skylights. UltraClear laminated glass is a safe and secure option for any application where safety is a concern.
