SGP **Laminated**

SGP Laminated glass is a type of safety glass that is made by bonding two or more layers of glass together with a special interlayer. This interlayer is made of a plastic material called polyvinyl butyrate (PVB) or ethylene vinyl chloride (EVC). The interlayer is sandwiched between the glass layers and is held in place by heat and pressure. This process creates a strong bond between the glass layers, making the resulting glass much stronger and more resistant to impact than regular glass. SGP Laminated glass is used in a variety of applications, including windows, doors, and glass railings. It is also used in automotive applications, such as windshields and side windows. The main advantage of SGP Laminated glass is its ability to hold together even if it is broken, which helps to prevent injury and property damage. Another advantage is that it is highly resistant to fire and heat. SGP Laminated glass is also available in a variety of colors and finishes, making it a versatile choice for many different projects.

SGP **PVB**

SGP PVB Laminated glass = 2 x 3mm glass + 1.52mm PVB interlayer
PVB Laminated glass = 2 x 3mm glass + 1.52mm PVB interlayer x1.25
