

Window frames are made of UPVC, aluminum, or wood.

UPVC window frames are durable, low-maintenance, and energy-efficient. They are made of polyurethane, which is a strong and lightweight material. UPVC frames are also resistant to corrosion and weathering. They are a popular choice for residential and commercial buildings. The frames are made of a single piece of material, which makes them easy to install and maintain. They are also available in a variety of colors and finishes to match your home's decor.
