

Factory price tempered tinted laminated glass, toughened laminated glass with color pvb film

Color laminated glass is made of two or more sheets of glass together with a translucent colored plastic interlayer. Color laminated glass is similar to [clear laminated glass](#) but with the addition of a coloured (PVB) interlayer.

Characteristic

- 1)Beauty sense: Color/tinted laminated glass with pvb interlayer will beautify the buildings and seen perfect which meet the demand of architects.
- 2)Excellent Safety:when it get broken, the PVB interlayer bonds the broken fragments together, keeping the glass intact.
- 3)UVR Resistance:The PVB interlayer can filter out UV rays, so laminated glass can protect indoor furniture, curtains, exhibits and other objects from fading.
- 4)Sound insulation: heat insulation and moisture protection.
- 5)Highly durable:so it can effectively avoid hurricane for storefronts, curtain walls and windows.

Application

1. Windows, Doors, Skylights and Canopies (safer and stronger, create elegant new designs and framing systems)
2. Facades and Curtain Walls (stiffness, clarity, and impact toughness in high-performance, building facades and curtain walls)
3. [Glass Railings](#), Balustrades, Pool fence and Partitions (keep people in safe places, preventing injuries related to sudden glass failure)
4. [Glass Flooring](#) and Stairs (offer an extra level of deflection strength and structural integrity)
5. Glass Storefronts and Retail Displays (seen clearly, stay safely secured)
