

## Professional [digital printing glass](#) factory supply decorative tempered digital printing glass

### Tempered Glass Introduction

[Tempered glass](#), also name Toughened Glass, is fabricated by heating annealed glass to over 600°C and cooling it rapidly, which locks the outer surfaces of the glass in a state of high compression, and the core or center of the glass in compensating tension. It is a safety glass which is used when strength, thermal resistance and safety are important considerations.

### Digital Printing Glass Introduction

Digital printing glass is a high technology by using multi colors to print pattern in many colors at same time. Then it go through tempered glass furnace to get tempered digital printed glass. The machinery we use is the diptych from Israel that is the best top quality in the world.
