

10 mm Acid Etched float glass

10 mm Acid Etched float glass

10 mm Acid Etched float glass is a type of glass that is etched with hydrofluoric acid. The etching process creates a textured surface that is resistant to scratches and abrasions. This type of glass is commonly used for architectural applications, such as glass facades and interior partitions. It is also used for safety glass applications, such as in vehicles and public buildings. The etching process is performed at a temperature of 700 °C. The etching process creates a textured surface that is resistant to scratches and abrasions. This type of glass is commonly used for architectural applications, such as glass facades and interior partitions. It is also used for safety glass applications, such as in vehicles and public buildings. The etching process is performed at a temperature of 700 °C.

10 mm Acid Etched float glass

Thickness: 10 mm

Dimensions: 3000 * 8000 mm, 150 * 300 mm

Applications: architectural, safety, interior, exterior, etc.

Edge work: beveled, polished, chamfered, etc.

Surface treatment: etched, sandblasted, etc.

Cutout: rectangular, circular, etc.

Installation: adhesive, mechanical, etc.
