

## **10 mm tembaga berwarna gelap kaca kilang, 10 mm euro gelas, 3 / 8" gelas gangsa tahan karat**

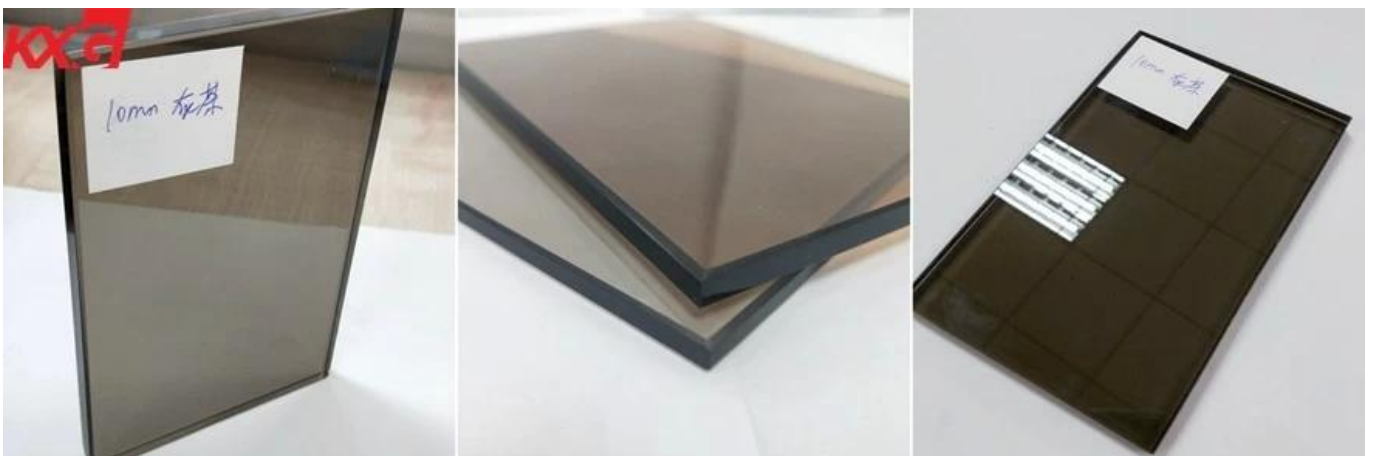

### **Kira-kira 10 Kaca Merah Kaca mm Euro:**

10 mm euro glass is produced by 10 mm euro glass. It is a type of safety glass, because it can increase the strength on the glass surface. Usually, it is treated with physical treatment. It is processed by heating to a temperature of more than 600 ° C and then cooled quickly. Increasing the tension in the glass so that this type of glass increases the resistance to heat, strength, hardness and impact resistance.

### **10 mm euro glass has the same characteristics as 10 mm colored glass:**

- Reducing the transmission of ultraviolet radiation that is dangerous so that it can protect machinery and decorations from fading.
- Reducing solar glare and heat transmission can save energy costs.
- The color is different from the usual one, offering a better choice for exterior and interior decoration.

### **Specifications of 3 / 8" thick glass:**

10 mm toughened glass is available in a maximum size of 3000 \* 8000 mm, minimum size of 150 \* 300 mm. Other sizes are available as per design.

All processes must be completed before the processing, such as drilling, etc.

gerudi dan notch, saiz dan bentuk pemotongan. Anda boleh menyebut butiran mengenai lukisan reka bentuk, kita boleh membuat kaca terbaja yang sama.

Sekiranya 10 warna gelas gangsa mm euro terlalu ringan untuk permintaan anda, kami mempunyai pilihan warna gangsa lain - 10 gelas gangsa gangsa gelap mm (10 gelas gangsa gangsa emas mm)
