

1/4 inch white color PVB film float laminated safety glass, 6.38mm white PVB film clear laminated glass, 331 white PVB film laminated glass factory

6.38mm white PVB film clear laminated glass introduction of KXG building glass factory

[6.38mm white color PVB laminated glass](#) is comprised of two layers of 3mm clear float glass which are bonded together with a layer of white color PVB, using heat and pressure, which is a kind of safety glass, decorative glass and heat control glass.

331 white color PVB film laminated glass characteristic from KXG building glass factory

1. High safety

When the laminated glass is attacked by outside force, the PVB film has strong tenacity and can absorb and weaken a mass of striking energy, so it is very hard to penetrate. Even if it's broken, the broken glass sharp pieces will stick on the PVB film and not scatter, to ensure the human safety effectively.

2. Good performance of heat control

3. With the white [color PVB film laminated glass](#), the 6.38mm white laminated glass can block a plenty of the UV and absorb the heat in the infrared spectrum, which make it play an important role on the buildings as the energy saving material.

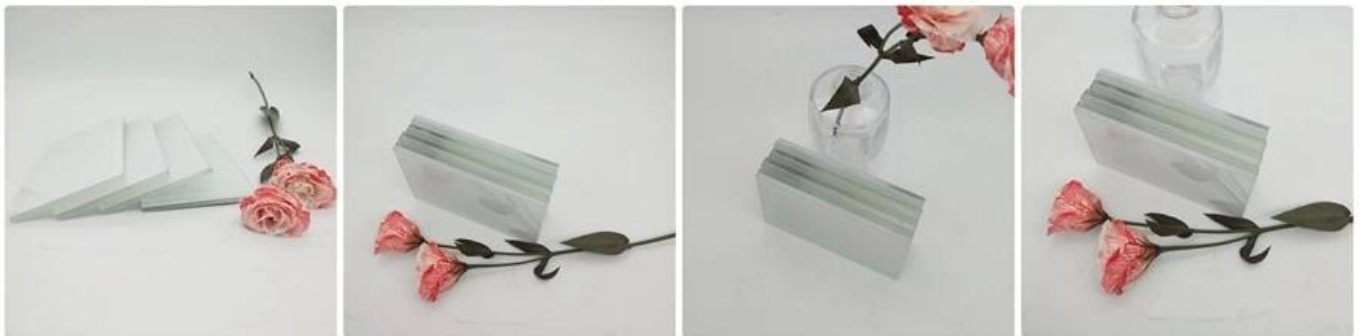

4. Good performance of sound control

The PVB film is a kind of organic material and it can block sound waves. So the 6.38mm white laminated safety glass offers better sound insulation performance than the 6mm clear float glass or 6mm white [silk screen printing glass](#)

KXG 1/4 inch white color PVB film laminated glass specifications

1. Composition: 3mm clear float glass + 0.38mm white PVB + 3mm clear float glass
