

China building glass factory 10.76mm color PVB toughened laminated glass

10.76 mm color PVB laminated glass wall window

The laminated glass changes color by changing the color of the intermediate layer PVB film. Due to the limited color choice of a single glass, some designers have special requirements for color, and color PVB can solve these problems. Color PVB can be customized in color, just by providing a color number, we can produce the desired laminated glass.

10.76 mm color PVB laminated glass

Safety

When the glass breaks, the glass will be on the broken PVB

Easy to process

Tempered glass lamination: cutting, drilling, and polishing edges must first be natural.

Non-tempered laminated glass: trimming, drilling, etc., after lamination.

Sound insulation

The noise of the laminated glass is good, and the thickness of the single layer is the effective sound of the insulating glass, and the display color PVB can block the spread.

Rich architectural color

The color PVB laminated glass cover meets the designer's requirements. Any color can be achieved. It can improve the last dull color building, elegant architecture, and bring new visual effects
