

China Glass Factory Curtain Wall Insulation Glass - Custom 6mm 9A 6mm Insulating Glass Distributor

6 mm 9A 6 mm double glazing glass

The KXG double glazing consists of two 6mm [tempered glass](#) sheets separated by a 9A gasket. The space between the two or three layers of glass is filled with dry air or an inert gas. These glasses are most commonly used in residential window applications. The products can be made up of color reflective tempered insulating glass, color reflective tempered composite insulating glass, and low temperature tempered insulating glass.

Double glazed windows keep heat during the summer and keep it cold during the winter, reducing energy consumption.

Feature

1. Be strong and be broken into pieces when affected.
2. Low permeability coating for soft light and good [insulation of glass](#).
3. Efficient energy-saving and sound-proof environment production.

Application

- External use of windows, doors, skylights, roofs, curtain walls, etc.

To ensure quality, all of our IGUs are tested differently during the production process. Such as peel adhesion test, hardness test, frost point test, etc. With high production capacity and strict quality control, we are 100% confident to provide you with the highest quality glass and the most satisfactory service.
