

Euro American use 6.38mm 8.76mm 13.14mm 17.52mm color PVB laminated glass factory in China

6.38mm [color PVB laminated glass](#)

6.38mm color PVB laminated glass is made of 2 pieces of 3mm transparent float glass or 0.38mm color PVB ultra-clear float glass. The laminated glass is essentially a glass interlayer. It is made by bonding glass layers together under pressure and heat, PVB. This technique is used to make a single piece of glass with multiple layers.

331 color PVB laminated glass specifications

Combination: 3mm transparent float glass or ultra-clear float glass + 0.38mm color PVB + 3mm transparent float glass or super clear float glass

PVB color: dark blue, Ford blue, dark gray, European gray, dark green, F green, dark bronze, European bronze, milky white, snow white.

PVB available thickness: 0.38mm, 0.76mm, 1.14mm, 1.52mm, 1.9mm, 2.28mm etc

Size: Accept custom cut sizes.

Glass Thickness: 6.38mm

Application of 331 color PVB laminated glass

1. Internal glass partition wall
2. Balustrade
3. [Door or window](#)
4. Display case
5. Others

Advantages of 3 + 3 color PVB laminated glass

Laminated glass is considered to be very safe because it is not easily broken. It will not split into large pieces. The pieces of broken glass stick to the inner tear-resistant plastic layer, keeping them in one piece. PVB makes the glass difficult to decompose and provides high sound insulation. In addition, the laminated glass blocks nearly 99% of the UV transmission.
