

# China glass factory 8.76mm transparent laminated glass supplier

## 8.76mm transparent laminated glass

Laminated glass is classified as Class A safety glass. The 8.76mm clear laminated glass is made of two layers of 4mm clear float glass and is permanently bonded to the 0.76mm clear PVB interlayer by controlled, high pressure and industrial heating processes. The lamination process causes the glass sheets to remain together in the event of a break, reducing the risk of injury.

## 8.76mm transparent laminated glass characteristics

### High security

When the laminated glass is subjected to an external force, the PVB film is difficult to penetrate because it has strong toughness and is capable of absorbing and weakening a large amount of impact energy. Even if it is destroyed, the debris will stick to the interlayer without spreading.

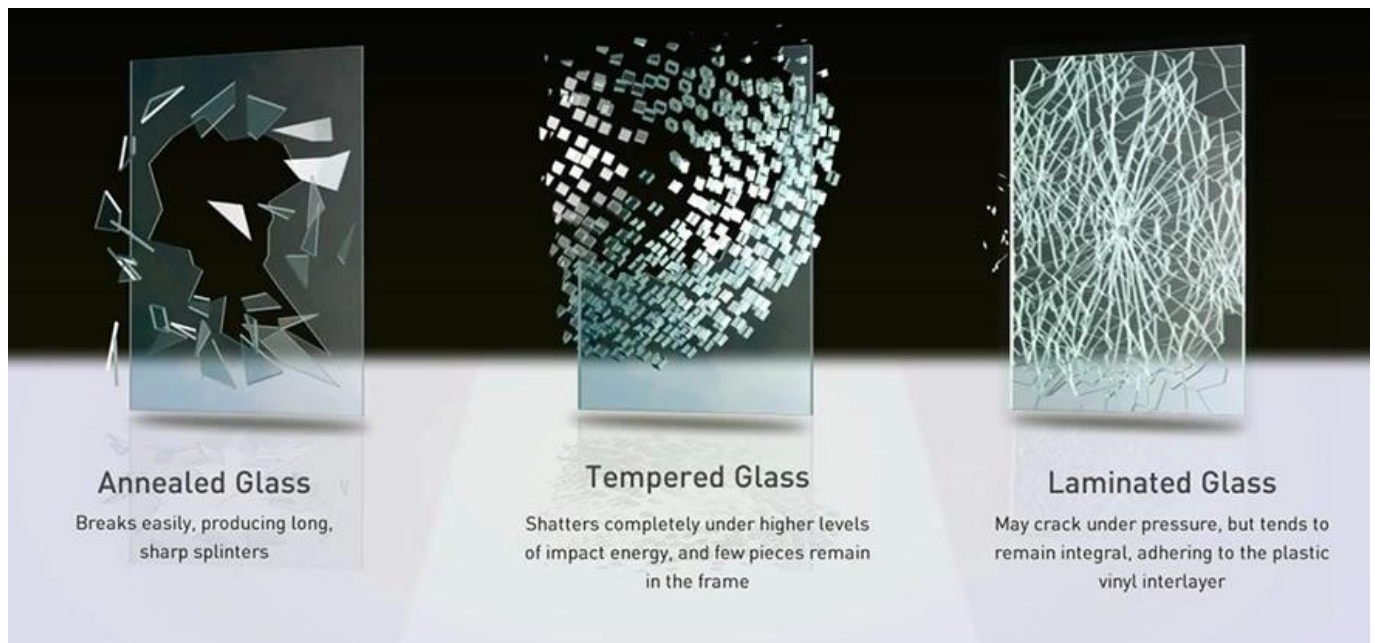

### Sound insulation

The PVB film is an organic material that blocks sound waves. Therefore, laminated safety glass provides better sound insulation than pure glass having the same thickness.

### Create beauty for architecture

The 8.76mm [laminated glass](#) will beautify the building so that its exterior is in harmony with the

surrounding landscape to meet the architect's needs.

## **8.76mm transparent laminated glass available in standard sizes**

1830x2440mm, 2140x3300mm, 1830x3000mm, 2140x3660mm, 2440x3300mm, 2440x3660mm, can be customized for any size cutting.

## **8.76mm transparent laminated glass application**

- Internal office partition wall, shower room, balustrade
- Exterior balcony, railing, storefront, promenade
