

China building glass factory supply special-shaped tempered low e reflective insulated glass for skylight and facade

About the special-shaped insulated glass for skylight

Double glazed glass consists of two panes of [special-shaped tempered glass](#) and low e reflective separated by a spacer. The space between the two (or three) glass is filled with dry air or a noble gas. These are most often used in residential window, skylight and facade applications. Products can be combined by color reflective tempered insulated glass, low e tempered insulated glass, color reflective tempered laminated insulated glass, etc.

Dual double glazed pane windows and skylights keep the heat out during the summer and cold out during the winter, cutting down energy use.

The triangle shaped low e tempered insulated glass facades features

- 1☐ Stay strong while be impacted ,and shattered in pieces.
- 2☐ Reflective coating to make the light soft and glass with good insulation
- 3☐ High efficiency in energy saving and soundproof environment production
- 4☐ Lower self-weight of building

- 5☐ Good vision, can see the scenery outside of building

Kunxing Glass can do many combination double glazing glass, such as [acid etched glass](#), silk screen printing glass, digital printing glass etc. They also can do insulated glass for diferrent application.

Kunxing Glass Special shaped reflective tempered insulated glass skylight Application

The special shaped low e reflective tempered insulated glass export to Dubai. And it is used for the skylights and facades of private villas in Dubai. We use the low e glass and clear tempered glass panel cutting to the size of customer need. the special shaped low e reflective toughened double glazing glass can proof heat to saving energy and proof sound.
