

Safety 5 + 5mm design clear textile decorative laminated glass

Decorative laminated fabric glass

5 + 5 mm [laminated fabric glass](#) is also referred to 10 mm fabric laminated glass. Fabric laminated glass includes two or more layers of glass that are bonded to the interlayer using heat and pressure. In addition to this PVB and fabric, there are also color interlayers, metal meshes, digital prints, silk, and even paper to realize various possibilities. It offers a wide range of possibilities for a variety of applications, including screens, partitions and cladding.

Custom design fabric glass panel specifications

Fabric laminated: fabric, other materials available, such as [digital printing](#), silk, paper, metal mesh, etc.

Glass type: 5mm transparent glass or 5mm ultra clear glass

Thickness: 5 + 5mm, other thicknesses, such as 4 + 4mm, 6 + 6mm, 8 + 8mm, 10 + 10mm, etc.

Size: The maximum size can be 3000 * 13000mm. Custom sizes are based on customer requirements.

Deep processing: drilling, the glass needs to be tempered when the edge is polished.

Advantages of 5 + 5mm textile laminated glass

1. A variety of fabrics, beautiful and refined.
2. Different fabrics allow for varying degrees of light transmission and visual control when used in bulkhead or screen applications.
3. The fabric is encapsulated between the glass sheets to ensure they are protected and easy to clean the surface.
4. The packaged fabric is UV resistant due to the interlayer used in the lamination process.
