

## Decorative glass 5mm 6mm 8mm ford blue dark blue inted reflective toughened coated glass factory

The heat reflective glass is generally a film formed by plating one or more layers of a metal such as chromium, titanium or stainless steel or a compound thereof on the surface of the glass. It makes the product rich in color, has appropriate transmittance for visible light, has a high reflective for infrared rays, and has a high absorption rate for ultraviolet rays. Therefore, it is also called [sun control glass](#), mainly used in buildings and glass [curtain walls](#).

### 5mm light blue reflective float glass Advantages

1. 5mm ford blue reflective glass absorbs and reflects a major proportion of the sun's direct energy more effectively than 5mm ford blue tinted glass.
2. Easy to cut, used for window directly; make as 5mm ford blue tempered glass, 5+5mm ford blue tempered [laminated glass](#), 5+5mm ford blue insulated glass, used for window, door, curtain wall, etc.
3. Heatproof and solar control: Reduce ultraviolet light transmission; Effectively restricting the incidence of direct solar radiation and has obvious shading effects.
