

Half tempered clear glass factory -heat strengthened ultra clear glass price-semi-tempered glass supplier in China

Heat strengthened glass is also called heat-enhanced glass. Heat strengthened glass is a type between ordinary flat glass and tempered glass, which combines some of the advantages of tempered glass. If the strength is higher than that of ordinary float glass, it is twice that of ordinary float glass.

At the same time, it avoids the flatness of tempered glass and is easy to self-explosion. When the Heat strengthened glass breaks, it is radially radial cracked along the crack source, and generally there is no tangential crack propagation, so the general condition can still keep the whole collapse without damage.

[Heat strengthened glass](#) is generally recommended for use in combination with laminated glass due to its particularity. It increases the strength of the glass and ensures its safety.

Characteristic

1. Security
2. Anti-theft
3. Sound insulation
