6mm tinted glass

6mm tinted glass is a type of glass that has been treated with a thin layer of metal or metal oxide. This process gives the glass a uniform color and reduces glare and heat. It is commonly used in windows, doors, and partitions. The tinting process is done by adding a small amount of metal salt to the glass during the manufacturing process. The resulting glass is stronger and more durable than standard clear glass.

6mm tinted glass features:

- Provides excellent UV protection, reducing fading and heat damage to interior surfaces.
- Reduces glare and heat, improving energy efficiency and comfort.
- Offers enhanced privacy and security.
- Available in a wide range of colors and tints to match your aesthetic.
- Durable and long-lasting, with a low maintenance requirement.
